

# FAcoat RALLY MONGOLIA 2025 ENTRY GUIDANCE

## 1. Route

**Let us be going to Rally Mongolia sanctuary, Zoumod.**

In our early days around 1998, we tried to extend route to the south Gobi, end of the earth for logistics. Test run team ran through dried-up river to the field. Unobstructed brown ground was there. In contrast, they saw a haze on the far right. Mirage or a forest? They turned the steering wheel to the right. Believe it or not, no wheel track in front of them. There was a forest for a while. Clear water springs out of a small well. Forest trees overcame wind and snow for hundreds of years. Since then Rally Mongolia often made a bivouac at that place. Gaston Rahier and Raymond Loiseau used to enjoy a stay.

In 2025, we stand for "The Classic" and we have decided to go there even there is a difficulty about a catering meal and a refuel.

Dinosaur Valley, overwhelmed great plain, and Sugawara Pass are waiting for you.

### 1-1 Route book and timing chart

The final decision on the route will be made during the final test run which will last one month and start on May to June 2024. The route will not exceed 4000 km at most. The route decided on will be printed up as a route book and delivered to the participants as early as possible.

At the same time as the route book, the rally timing chart, the route information, and other items will be supplied to provide an understanding of the general progress of the rally.

#### Timing chart

Here, the distance the rally will cover each day, the starting time, control points positions, etc. will all be covered. As long as there are no major changes, things will proceed according to this plan.

### 1-2 Briefing

Each morning, 30 minutes before the rally starts, there will be a briefing in front of the rally headquarters or in front of the restaurant tent. At bivouacs where there is a restaurant, the briefing will be held in the restaurant.

Always attend the briefing. It will cover important points, such as locations requiring extra caution and other aspects of the condition of the route for the day. The briefing will be conducted in Japanese, English, Mongolian, etc. The briefing will be conducted by Tetsu Yamada, who is the course director. This information will be posted on the bulletin board in front of rally headquarters, together with the results etc.

## 2. Fuel and refueling

### 2-1 Principle

A basic rule of this rally is that all race competitors must pay out of their own pockets for gasoline and oil refills and so on at the liaison areas shown along the rally route.

### 2-2 Quality

Fuel is basically produced in Russia. Fuel is basically produced in Russia. The gasoline that is available is grade A-92 or A-80. Nowadays, A-95 is available in large towns. There is only one type of diesel fuel in Mongolia: Summer diesel.

### 2-3 Cruising distance

The rally course range for both the automobile and motorcycle class is basically 280 kilometers+over 10%. Therefore, the maximum SS(special stage) distance is up to 560 kilometers.

On all etapes, we strongly recommend including 15% in case of driving off course or other problems

## 3. Water and lunch packs

### 3-1 : Amount of water to carry

In this rally, the minimum amount of water required for each stage is predetermined and each participant must start out carrying at least that much water.

### 3-2 : Lunch packs

Each morning before the start, participants will receive a lunch pack together with their bottles of water. This lunch pack will include high-performance foods that aid in the resupply of salt and of energy, so always bring this lunch pack and only consume the emergency food that you yourself have prepared if there is a real emergency.

### 3-3 : Collecting trash from lunch packs

Always bring back the trash from your lunch pack. Collection of the trash from the day' s lunch pack is a precondition for receiving the next day' s lunch pack. Anyone who does not bring back the trash from their lunch pack might not be supplied with a lunch pack the next day.

## 4. Safety

**4-1 : To ensure a safe rally, participants will be provided with an emergency manual called "The Triple Cautions for Your Life" .**

### 4-2 : Medical care

Some 2 or 3 doctors will cover the rally. One will constantly monitor from the air by helicopter and one will be on the course following the riders in the medical car. A medical tent will be set up next to the rally headquarters and equipped with surgical supplies, etc. The chief doctor will be an emergency care physician.

### 4-3 : Searches

Participants must ride the pre-determined route. Some risk is possible if a participant should go off the course and have difficulty returning, or go off the course and become injured, or the like. Therefore, carrying an Iridium mobile phone for emergency contact with the organizers is mandatory.

### 4-4 : Rescue and transport

If an emergency arises, the organizers will immediately pick up a participant by helicopter and evacuate them by air to Ulan Bator. In such a case, the organizers will make the arrangements for a hospital in Ulan Bator and at the same time, depending on the circumstances, arrange for a return flight home.

### 4-5 : Safety on the route

The rally route passes through many villages. We ask you to restrict your speed when in villages and to observe a limit of 40 kilometers per hour. The organizers will monitor speeds through villages and impose a major penalty on violators. Also, there are many sheep, goats, and other animals on the route. The responsibility for safety rests with the participants.

### 4-6 : Route closure

A Hino truck with the number Z1 will ride behind the rally and pick up participants who have machine trouble or other problems.

## **5. Vehicle alteration and organizer assistance**

**5-1 : Conforms with FIA/FIM regulations**  
**In particular the items concerning safety are absolute.**

### **5-2 : Required equipment**

Both automobiles and SXS and motorcycles must have systems for accurately measuring distance to a accuracy of 10 meters. The route book gives distances in kilometers to two digits after the decimal point, for example 123.45 km. In the motorcycle category, we recommend ICO or the like; and in the automobile category, we recommend TERRA TRIP or the like. Also, in the motorcycle category, a route book holder is mandatory. Installation also requires specialized technology for example to minimize movement of the rider' s line of sight. In both categories, in order to minimize the risk of fire, adequate measures are required for fastening fuel hoses and the like. What is best is an Aeroquip type connecting system. For hose bands, double metal bands must be used. Also, batteries must be behind a separating wall that is made of nonflammable material.

In the motorcycle class, wearing a neck brace is mandatory. In the motorcycle class, the required lights and safety equipment are a headlight, tail lamp, brake lamp, adequate rear reflector, horn, and back mirror. An extra stop lamp, dust lamp, and turn signals are not required.

### **●GPS**

Though there is no download service available from the rally organizers, data can be procured in advance. Organizers recommend that everyone inputs data into their devices.

**The all vehicles to reach the goal must promptly enter the parc ferme (secure rally area) and submit their GPS logs to the officials. Certain penalties are imposed on those who cannot submit their GPS logs whatever the circumstances.**

High ranked vehicles are required to bring GPS data logger supplied from SSER.

### **●SPOT**

Those participating in this rally for the first time as well as participants named by the organizers must have a handheld GPS satellite transmitter (SPOT). Unlike previous rallies, participants must individually purchase and keep these cellphones with them.

### **●Video recording device (driving Recorder, etc.)**

In order to record the situation at the time of an accident, we recommend the use of an in-vehicle driving recorder or a wearable camera attached to a helmet, etc.

### 5-3. Assistance by organizers

#### ●Duffle bag transport system

The system for transporting duffle bags from each day' s bivouac to the next one means that the organizers will transport 30 kilograms of luggage per person. A fee will be charged for transporting anything weight greater than this weight.

We will distribute two bags, one for 20 kg and one for 10 kg, with this year' s original SSER logo to be used in the rally, so always be sure to use them.

Transportation between the bivouacs is the responsibility of a truck with X-1 numbers.

In come cases its arrival might be drastically delayed due to weather or other course conditions.

Please recognize that there are limits to what can be done in Mongolia to speed up the arrival of this transport truck.

#### ●Tire transport service

In the motorcycle class, the organizers transport up to 4 tires for each participating motorcycle. Among these, two tires may be mounted on wheel rims, and other parts that may be mounted are tubes and sprockets. Brake disks must not be installed on these tires. It is also necessary to provide adequate protection for them as well.

In the automobile class, the organizers transport up to two tires for each participating automobile. From the

third tire onward, a fee of ¥20,000 (tax included) per tire must be paid. The bivouacs to receive these tires will be decided immediately before the rally after the transport team is put together and the final proposal made.

#### ●Lodging service

Basically a bed and sleeping gear are prepared for all participants. There is a hotel or tourist camp at each bivouac (temporary camp).

However, although tents are no longer required under the equipment regulations, please bring a sleeping bag in case of unexpected situations.

#### ●Bivouac

**Participants are required to bring sleeping bag, tent, and dishwhere.**

#### ●Services at bivouac

An electrical generator, air compressor, and welder will be available at the bivouac.

#### ●Stellite mobile phone is mandatory.

Participants are required to carry an Iridium mobile phone as a means of emergency communication.

## 6. Access to rally area

### 6-1 : International cargo transport ABOUT THE TRANSPORTATION

Regarding Rally Mongolia 2023, SSER is announcing the official partner (consignee) and customs clearance agent(/customs broker) in charge of receiving operation within Mongolia as below.

At the present time in Mongolia, the customs clearance is getting very strict. The relevant authorities require the usage ATA Carnet for customs clearance. This is a temporary custom clearance notebook on the condition of re-exportation. Please confirm export-import agents in your own country.

Please write the following Mongolian federation name as a consignee/recipient in the shipping documents, NOT the sender's name.

If you write your name as a consignee/recipient, then your shipping customs clearance acceptance will NOT start until you go to accept your shipments. So you might then have trouble with customs clearance and procedures. Please designate the conveyance as below to keep business procedures consistent.

[Mongolian Consignee]

E-mail: bayaraa@tuushin.mn

### 6-2 : Returning cargo

If an ATA carnet is used, the list of returning cargo must exactly match the list of cargo that entered the country. Therefore, used tires from the rally are always brought back. Also, be careful to not mix in souvenirs or the like with your returning cargo.

6-3 : Arranging for participants' air transportation etc.  
Access to Mongolia is extraordinarily limited and arranging air transportation for the peak summer season when the rally is held is expected to be difficult so we strongly recommend making your air travel arrangements early.

**Now on  
to the wonderful world of  
Rally Mongolia!**
